

*50 Days 50 SQL Questions
Work Completion* ✨

Day 51/50

***Yes, You read it right, it's Day 51
as today I came to complete my
LeetCode SQL challenge ✨🎉***

Progress Highlights

Today marks the 51st Day of my LeetCode SQL challenge. So what did I learn from it?

Concepts or Things I Learnt:

Of Course I learnt and understood imp. SQL concepts like CTEs, subqueries, window functions and all but above all it I learnt that **consistency pay off**. I mean doing things a very little each day is so much better than doing absolutely nothing or doing something big one day and then going off for several days or months.

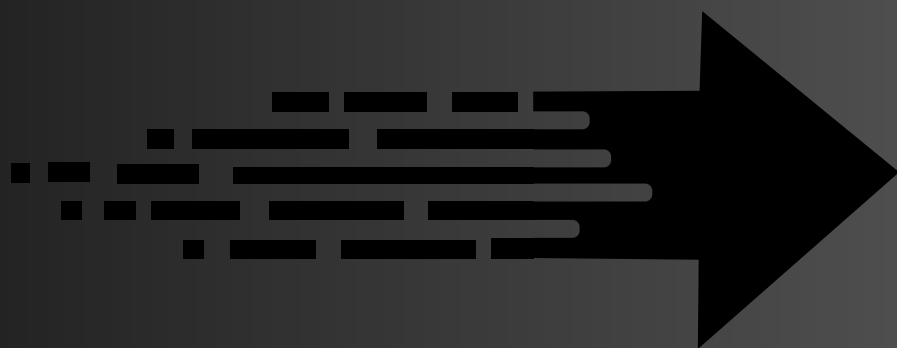

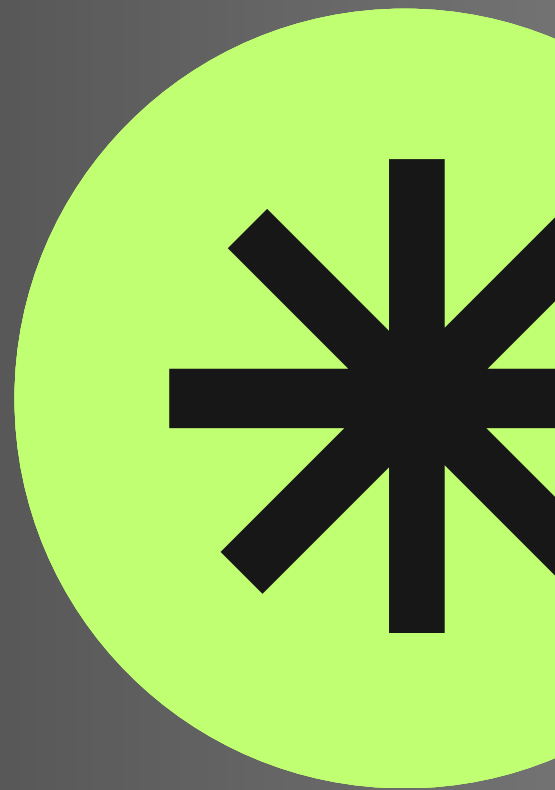

Favourite Problems

> Problem No. 1321: Restaurant Growth

Made me understand how to make a window in SQL and how to work with it. Using a subquery to make that window made things easier for me. It definitely stood out to me to a certain extent.

> Problem No. 1517: Find Users with Valid E-Mails

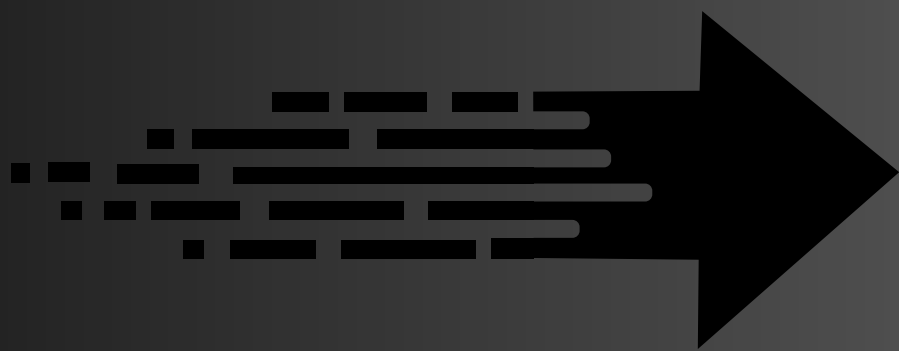

Although it was marked easy on LeetCode it challenged me. Because initially I was using LIKE op to solve the question but then I soon understood it's limitations and went on to use REGEXP and it made me understand the importance of REGEXP in advanced matching cases.

Impact on my Growth

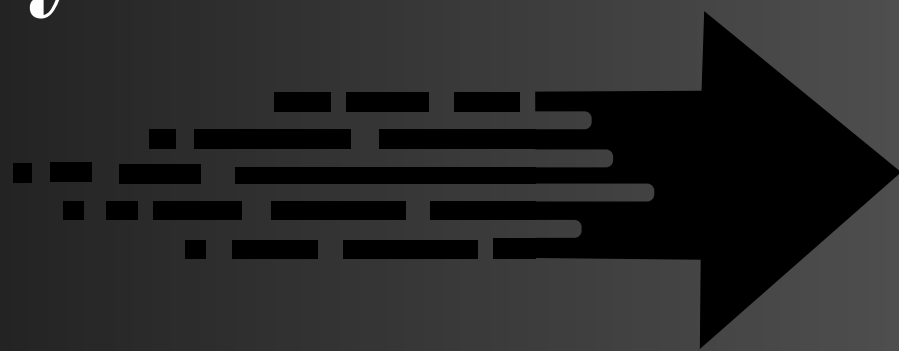

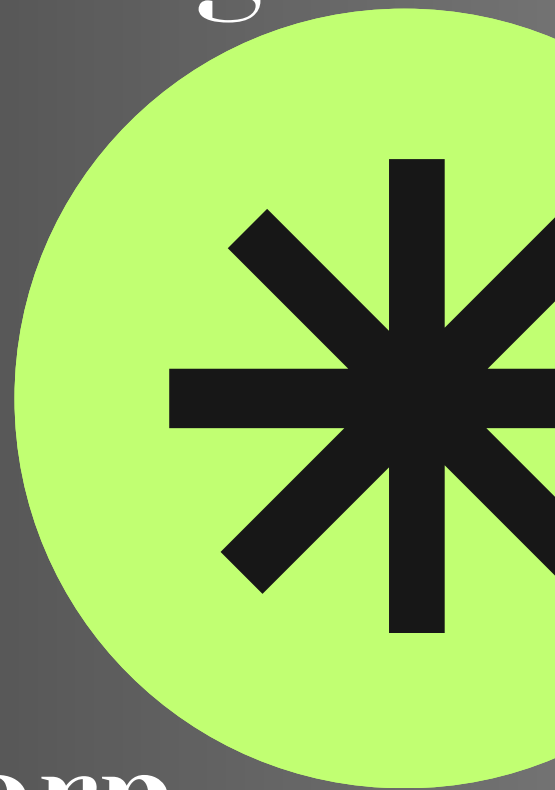

- > Learned using basics to advanced SQL concepts.
- > Practiced most used SQL concepts like GROUP BY, WHERE v/s HAVING, UNION v/s UNION ALL, CTEs (common table expressions), subqueries, JOINS, LIKE, REGEXP, WINDOW functions like ROW_NUMBER(), RANK(), DENSE_RANK() etc.
- > Also glad to earn SQL 50 badge on LeetCode.

Next Steps

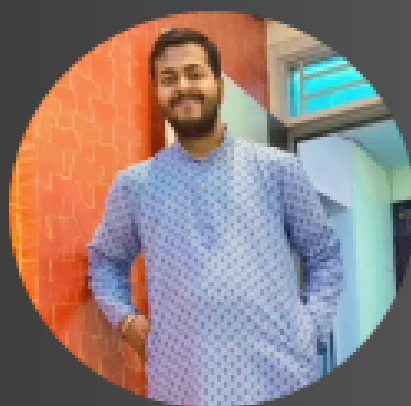

- > Will Continue to learn & practice more SQL questions on diff sites and all. If you know **any sites for practicing SQL questions then do let me know in the comment section.**
- > Will apply this learned knowledge in some SQL project or make work on more EDA projects in SQL.
- > Will continue to learn more advanced SQL concepts in future and will continue to learn from you guys as well.

Thank You to all who have
supported me to this far.
Will continue to learn from
you guys and share my
journey. 😊
