Work In Progress

Day 45/50

***45. Delete Duplicate
Emails***

50 Days 50 SQL Questions

Work In Progress

Question

Write a solution to **delete** all duplicate emails, keeping only one unique email with the smallest `id`.

For SQL users, please note that you are supposed to write a `DELETE` statement and not a `SELECT` one.

For Pandas users, please note that you are supposed to modify `Person` in place.

After running your script, the answer shown is the `Person` table. The driver will first compile and run your piece of code and then show the `Person` table. The final order of the `Person` table **does not matter**.

Table

Input:

Person table:

```
+-----+-----+
| id | email |
+-----+-----+
| 1 | john@example.com |
| 2 | bob@example.com |
| 3 | john@example.com |
+-----+-----+
```

50 Days 50 SQL Questions

Work In Progress

Approach

Used a window function `ROW_NUMBER` in CTE and partitioned the records by email and order by id. Then deleted all the records from reqd. table where `row_num` is more than 1 indicating that it has same email.

Work In Progress

Query

MySQL   Auto

```
1 WITH CTE AS (  
2     SELECT  
3         *,  
4         ROW_NUMBER() OVER (PARTITION BY email ORDER BY id) AS row_num  
5     FROM person  
6 )  
7 DELETE FROM person WHERE id IN (  
8     SELECT id FROM CTE WHERE row_num > 1  
9 );
```

50 Days 50 SQL Questions

Work In Progress

Output

Output:

id	email
1	john@example.com
2	bob@example.com
